Rock Chalk Rendezvous Project Vision

The primary aim of this project is to make the process of scheduling meetings and activities for a group simple, fast, and straightforward. The existing tool When2Meet has a similar vision, but lacks key features that would more effectively fulfill these goals. In particular, we want to reduce repetitive work for groups of people who meet many times, enable differentiation between availability to meet in-person and online, and allow accurate schedule analysis for an individual without the need to wait for responses from all other group members.
