Glossary of Terms

RCR: Rock Chalk Rendezvous

User Calendar: The complete availability schedule for a single user.

Event Calendar: A calendar that includes the schedules for each user that has been added to the event.

Client side: Functionality or state that exists in or is handled by the end user's device when running the client application.

Server side: Functionality and state handled by the continuously running process on a dedicated server that manages communication between client applications and that users do not have direct access to.

UA: User Authentication

Auth: Short for Authentication

OS: Operating System

User Interface (UI): The point of interaction between the human user and the machine/system.

SRS: Software Requirements Specification

iCal: A widely-used format for the exchange of electronic calendaring and scheduling data between applications or systems.

UPEDU (Unified Process for EDUcation): A set of software engineering best practices that provide guidance to streamline the team's development activities.

GitHub: Online website that offers a cloud-based Git repository hosting service. Primary service that the team will use for version control and documentation upload.

MVP: Minimum Viable Product. The earliest or simplest state for an element of the project to have all essential functionality.
